**BACKGROUND AND INTERESTS**

I was undergraduated in computer sciences at Feevale University (2003) in Brazil, in my final project I applied a structured P2P system for assigning processes into computational resources at a local network exploiting computing idleness. My master was done at Unisinos in Brazil, along with Dr. Rodrigo Righi, where I investigated how to apply P2P overlays to Bulk Synchronous Parallel (BSP) models to improve the response time of applications. My current project is my Ph.D. (ENS-Lyon in France) where it consists of achieving elasticity on Big Data streams.

My professional experience started in 2003 at Altero Desing (a Brazilian company) by analyzing and describing industrial processes. In 2008, I entered the IT department of Altero Design working initially as a Software Developer and Architect, and after as an IT Manager. In 2009, I was invited to get the position of the project manager to migrate an in-house system to SAP ERP.

My research interests include: scheduling, real-time systems, machine learning, edge computing, and data stream analytics.
